Part 1

Antibodies and antigens for inflammation and cytokine release syndrome (CRS) testing-PCT, CRP, IL-6, SAA, IFN γ , AQP4, HBP, MOG

Cytokine release syndrome (CRS) is an acute systemic inflammatory syndrome characterized by fever and multiple organ dysfunction. Genemedi produces core diagnostic ingredients for test of systemic inflammation and CRS caused by infectious diseases or sepsis-related organ failure. GeneMedi offers paired antibodies (monoclonal antibody, mab) and antigens of inflammatory syndrome and cytokine release syndrome (CRS) biomarkers including: procalcitonin (PCT) antigens and paired antibodies (anti-PCT), C-reactive protein (CRP) antigens and paired antibodies (anti-CRP), Serum amyloid A protein (SAA) antigens and paired antibodies (anti-SAA), interleukin-6 (IL-6) antigens and paired antibodies (anti-IL6 or anti-IL-6) and so on.

All the antibodies of inflammation and CRS test are suitable for functional ELISA, and other immunoassays in diagnostics. The antibody can act as a Capture antibody and detection antibody.
